compounds. If you grew viruses on cells with radioactively labeled P compounds, the phosphate groups in the virus's RNA would become labeled but the protein would not become labeled. 7. Closely related macromolecules often have many characteristics in common. For example, they share many of the same chemical elements and functional groups.

### chapter 5 activity 3 4 Answers - North Allegheny School ...

Chemical Compounds A chemical compound is a substance formed by the chemical combination of two or more elements in definite proportions. The physical and chemical properties of a compound are usually very different from those of the elements from which it is formed. Scientists use formulas to show the ratio of elements that make up a compound.

### The Chemistry of Life

Elements and Compounds 1. A(n) is any substance that cannot be broken down into simpler substances. Its smallest unit is the 2. When two or more elements combine chemically, they form a(n). Its smallest unit is usually called a(n) 3. Most chemical reactions within cells could not take place without O Pearson Education, Inc., publishing as Prentice Hall.
