Work Description. Chiang's Fundamental Methods of Mathematical Economics is an introduction to the mathematics of economics. It starts with a review of algebra and set theory then goes on through calculus, differential equations, matrix algebra, integration. It serves well as a transition from very basic economics up to graduate level economics. Theory behind economic models is discussed and the focus is on mathematical economics, deduction, instead of econometrics and statistical inference ...

In this volume Dr. Chiang introduces readers to the most important methods of dynamic optimization used in economics. The classical calculus of variations, optimal control theory, and dynamic programming in its discrete form are explained in the usual Chiang fashion--with patience and thoroughness.
