Because corrective strabismus surgeries are typically performed in older patients with vasculopathic risk factors, there is a postoperative risk of anterior segment

Acces PDF Clinical Strabismus Management Principles And Surgical Techniques

ischemia. The risk is minimized by limiting the surgery to disinsertion of, at most, two muscles in a single operation and/or by using split-tendon procedures on the vertical rectus muscles during transpositions (Figure 10).

INTRODUCTION. Overaction (or apparent overaction) of the inferior oblique muscle is a common aspect of new and recurring cases of strabismus. It is more appropriately described as overelevation in adduction in the CEMAS classification system and by others. 1,2,3,4,5 Children with infantile esotropia often develop overelevation in adduction and/or

There are certain fundamental principles that should be followed when performing strabismus surgery: 1) whenever possible surgery should be performed on

Acces PDF Clinical Strabismus Management Principles And Surgical Techniques

the eye with the worst vision. However, this is not always possible and is not an inviolate rule; 2) strabismus surgery should be performed only when reliable, stable motility measurements are available.
