In fact, the size of the prey population has a strong affect on the size of the predator population and vice-versa. The following graph shows how the size of the Lynx and Snowshoe Hare populations in Canada changed over time. The data is based on the number of animal skins bought from trappers. Examine the graph and answer the questions. 1.

LAB WARMUP In modeling predator/prey interactions, one must make simplifying assumptions in this lab activity: □ Assume owls feed only on mice. □ Assume that all owls that can catch and eat a certain number of mice will survive and reproduce. These assumptions are like patterns that exist in nature, but they do not mirror them exactly.
