Music Changes the Activities of the Brain. Listening to, playing, reading, and creating music involves practically every part of the brain. In the book "This Is Your Brain on Music," Daniel J. Levitin explains that listening to music first involves subcortical structures like cochlear nuclei, the brain stem, and the cerebellum. It then moves up to auditory cortices on both sides of the brain.

Music listening enhances cognitive recovery and mood after middle cerebral artery stroke. *Brain* 131, 866–876. 10.1093/brain/awn013 ; Thaut M. H. (2005). *Rhythm, Music and the Brain: Scientific Foundations and Clinical Applications*. New York; London: Taylor & Francis Group.

## **Music and health: what interventions for what results?**

An infant's brain plasticity is enormous. Music activates both sides of the brain and creates new connections between them. But it's not just infants — adults can also enjoy these benefits. While changes are slower and less pronounced in the adult brain, the connections within it can still be enhanced.
