unfortunately there's no support for other formats. There's also Collection Creator - a handy tool that lets you collate several pages, organize them, and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

In this lab, you will set up switched LANs using two different switching devices: hubs and switches. A hub forwards the packet that arrives on any of its inputs to all the outputs regardless of the destination of the packet. However, a switch forwards incoming packets to one or more outputs, depending on the destination(s) of the packets.

The methodology of switched LAN models construction in the form of colored Petri net is introduced. For the simulation and analysis of the model the Design/CPN tool is used. The tasks of estimation of LAN switch's buffer size and network response time were solved. The components of the model are switches, servers, and workstations.

The replacement of the access method of the legacy LANs by an access control based on a policing function on the network side and on a shaping function on the user side is a clear discontinuity. However, the authors show that the need for a control of the access rate was already present in large networks involving the interconnection of legacy ...
