ThreadX (as well other RTOS) offers several features to help the developer dealing with stack issues. One of them, which is enabled by default, is the stack pattern filling, which fills all stack positions with a known pattern (0xEF) upon thread creation. It allows easy stack usage evaluation and sizing it according to specific thread needs.

I was just wondering if anyone else has worked with Green Hills before and could offer their opinion on their products and support. The embedded software guys I work with are open to moving to a different compiler and RTOS. I'm looking for a compelling reason to either stick with or ditch Green Hills, right now I'm firmly undecided.
